

Redlands is excited about the upcoming Civic Center Water Efficient California Friendly Landscape project as it will serve as a water friendly, colorful, lush garden filled with diverse plants all with the same purpose in mind, conserving water.

This project consists of replacing the current landscaping with water efficient, California friendly planting materials and the replacement of substandard irrigation lines in every planter at the Civic Center. This project will serve as a demonstration garden for water efficiency as well as raise awareness of the city's water conservation program. The replacement allows for a reduction in water use, as well as staff time and maintenance costs.
